

# A web site to follow-up literature in occupational health for healthcare workers

Gehanno JF\*, Kerdelhue G\*, Letord C\*, Fantoni S\*\*, Frimat P\*\*

\*: Rouen University Hospital and \*\*: Lille University Hospital

**Objectives:** Due to the overwhelming amount of publications, literature follow up in occupational medicine is more and more complicated and time demanding. In order to facilitate the identification of the relevant information by the occupational physicians, we have started 2 years ago a literature follow-up concerning occupational health of healthcare workers.

## Audience

- All occupational health professionals involved in occupational health for health care workers
- Health care workers themselves, including physicians, for improving their knowledge on their own risks

## Key Messages

The literature follow up is actualized weekly

It contains 1,425 references, 25% with a link to the full text and 67% in English

This literature follow up is freely accessible on a web-site ( <http://www.chu-rouen.fr/mtph> ).

A mailing list and RSS are also available.

The screenshot shows a web browser window with the URL <http://www.chu-rouen.fr/mtph>. The page title is 'Veille documentaire : Médecine du travail du personnel hospitalier' and the subtitle is '- Literature Follow-up : occupational health for Healthcare Workers -'. The main content area displays two articles:

- Un nouveau test d'aide au diagnostic et à l'évaluation de l'asthme professionnel : l'expectoration induite** (1 avril 2008). Category: Hygiène et gestion des risques, Articles en français, Articles en accès libre. Link: <http://www.irsst.qc.ca/files/documents/PubIRSST/R-545.pdf>
- Screening for Chronic Obstructive Pulmonary Disease Using Spirometry: U.S. Preventive Services Task Force Recommendation Statement** (4 mars 2008). Category: Bonnes pratiques, Articles en accès libre. Link: <http://www.annals.org/cgi/content/abstract/0000605-200804010-00212v1>

The left sidebar contains a 'Pages >' menu with links like 'Accueil', 'Fiches d'évaluation des risques biologiques...', 'Recherche d'articles', 'Recherche sur le web', 'Liste de diffusion', 'Archives', 'Liens', 'Flux RSS', and 'English'. Below it is a 'catégories >' menu listing various risk categories such as 'Articles en accès libre', 'Allergies', 'Bonnes pratiques', 'Conditions de travail et santé psychologique', 'Hygiène et gestion des risques', 'Infections nosocomiales', 'Risques biologiques', 'Accident d'exposition au sang', 'Contamination soignant-soigné', 'Transmission aérienne', 'Transmission de contact', 'Vaccination', 'Risques chimiques', 'Risques physiques', 'Rayonnements', 'Troubles musculo-squelettiques', 'Violence', 'Autres', and 'Veille juridique'. A 'Meta >' section includes 'Admin. du Site' and 'Déconnexion'.

## Methods

▪ A team of two medical librarians gather daily all information possibly relevant from :

- a list of websites involved in occupational health,
- bibliographic databases (mainly Pubmed and BDSP)
- the sites of the major medical journals.
- French governmental websites, for laws and regulations

All documents retrieved are examined by a senior occupational physician who selects the most important documents, *i.e.* those which bring valuable and accurate information.

Approximately 60% of retrieved documents are included in our database and posted on the web-site

Selected references are grouped into categories (*e.g.* infectious diseases, allergy, or ionizing radiations). The list of the different categories is available in english.

They are published weekly on a specific website (<http://www.chu-rouen.fr/mtph>) and posted on a mailing list created for this purpose.

A search engine is proposed on the website.

## Conclusions

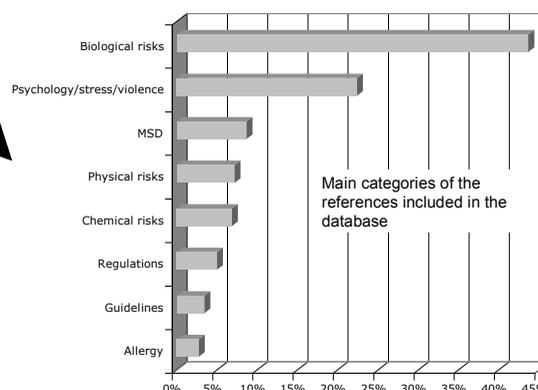

• The website has nearly 9000 visits per month.

• The mailing list, opened to everyone, includes more than 100 occupational health professionals, worldwide (<https://listes.crihan.fr/wws/subrequ est/mtph>).

• This follow up intends to help occupational health professionals involved in occupational health for healthcare workers to keep their knowledge up-to-date.

• It can also be helpful for students in occupational medicine since it displays reliable and relevant information.

• We hope that healthcare workers will find on the website information on their own risks, which is part of a risk management process

## Funding Source

This follow-up got a founding from the Caisse des Depots et Consignations
